HIGH EFFICIENCY EC MOTORS

High efficiency, with watt
savings of 30 to 70%

Manufacturing is never easy. You design and build your air handling equipment, furnaces and ventilation equipment to last. The main component in the system, the blower is the part that breaks the unit's back should there be a failure. You need components that you can trust, components that will last, components that will separate you from the rest of the pack.

THAT IS WHERE CANARM COMES IN.

Whether it's a small single or twin blower for a residential furnace, a heavy duty BI Utility blower or spun aluminum exhaustor for a kitchen ventilation system or a heavy duty framed Class II blower designed to power a high capacity air handling system, Canarm has the blower you need.

Let Canarm's knowledgeable, professional staff work with you to determine the blower you need, built to your specifications and to your standards.

Remember, your reputation is at stake with every unit you build. Don't settle for second best. Make sure that you use the blower that's best suited to your requirements. Make sure it's a Delhi blower from Canarm!

We customize to fit your requirements.
