JULY 2023

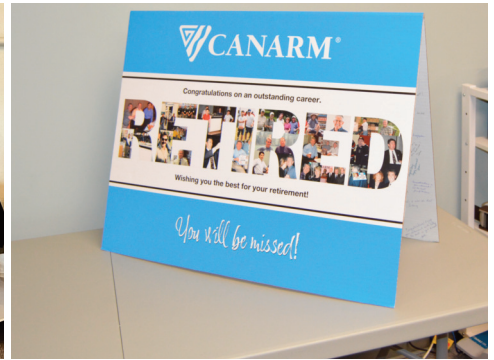

Happy Retirement Doug!

After 38 amazing years at Canarm, our VP of AG/HVAC, Doug Matthews has officially retired.

Over the years, Doug has had many roles and faced many challenges but he always persevered and played an integral role in making Canarm the success it is today.

Your knowledge, professionalism and commitment to our valued customers will be greatly missed!

Congratulations Doug and enjoy your very well-deserved retirement!

Bill Krul Celebrates 50 Years of Service

Here's something you don't celebrate every day - 50 YEARS OF SERVICE! June 1st marked Bill Krul's 50th service anniversary.

Bill has done amazing work over the years and has truly grown the company from the very beginning back when it was Bill's stabling and Manufacturing (his Uncle Bill Vanlenthe's company). Since then, it has become BSM Agri, Canarm/BSM and now Canarm AgSystems.

Bill is a key factor in the company's current success.

Thank you for 50 amazing years Bill! Congratulations on reaching this milestone.

Canarm - one of Canada's Best Managed Companies

Canarm is proud to have re-qualified in 2023 as one of Canada's Best Managed Companies, retaining our Platinum Club designation.

The key to our success according to Canarm President, Jim Cooper? "We focus on delivering top notch, quality products at reasonable prices backed by outstanding service. We invest in innovation and research to be on the leading edge of industry developments."

We achieve this through the hard work and dedication of all of our valued employees worldwide.

And of course we wouldn't be who we are today without YOU – our esteemed CUSTOMERS.

So thank you for sharing in our continued success!

Natural Ventilation Design For Your Dairy

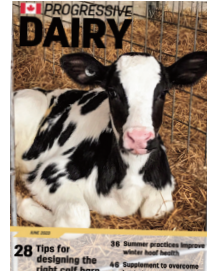

By Rick McBay
Natural Ventilation Specialist

Designing a natural ventilation system for your dairy involves putting together two necessary elements that create optimum conditions for year-round cow comfort. The basic design involves creating sidewall openings to allow adequate air movement throughout your barn in the spring, fall and summer, in addition to

creating a ridge opening to facilitate proper minimum air exchange during winter conditions. For the purposes of this article, I will be referring to a dairy in a geographic area where four seasons exist; southern climates will have different parameters.

The required size of your sidewall opening will depend primarily on the width of the building being ventilated. The minimum design standard is 1 foot of sidewall opening on both walls for each 10 feet of building width. This opening size will vary depending on the structural wall height of the building and site considerations with regard to existing

buildings and wind restrictions. In general, especially if you are planning on using a curtain sidewall system, the larger the opening the better. The curtain fabric when closed or partially open will provide you with the same protection as siding steel with the added benefit of extra air movement in hot weather.

Featured Product

INTEGRA COOLING PADS

Keep Your Sows Cool!

Canarm's Integra Cooling plate, keeps nursing sows cooler and more comfortable.

This improves nursing time, milk production, weaning weights, feed intake and overall body score.

The cooling pad has an integrated stainless steel pipe for cold water to be pumped through. The water channel does not add any extra height to the floor, allowing it to lay flush with the surrounding Integra floor pieces.

See Our Lift Crate in Action

Our lift crate in action at Art Bos' Barn in Brussels, Ontario.

When Momma stands, the crate raises, keeping piglets safe when not feeding.

And they're quiet enough not to disturb the piglets as evidenced by the little one in this video whose nap time is interrupted as the crate is raised.

Recent Comfy Calf Suites Install

Calves are all moved in to their new home in this recently built calf barn in Wisconsin, featuring Canarm Comfy Calf Suites.
