

Supporting the Spencerville Agricultural Society Fair

The Spencerville Agricultural Society is very excited to announce a new partnership with Canarm AgSystems. This partnership will go a long way in bringing much needed upgrades to the barns and facilities across our grounds. The support from this new collaboration will primarily go towards purchasing and installing up-to-date ventilation and lighting systems to our properties. We hope to optimize animal comfort with the installation of new, state-of-the-art fans in our barns, as well as our environmental awareness with the use of new LED light fixtures. These upgrades are essential in continuing to comply with the standard practices concerning animal comfort and welfare, as well as the standards we hold for ourselves as an agricultural organization.

Our plans for the future of our not-for-profit organization rely on our ability to be innovative. As the world around us changes, we are keen on being adaptive and responsive to these changes. We, at the Spencerville Agricultural Society, consider ourselves a leader in our community, and as such, we want to lead the way and set an example within the continuously evolving field of agriculture. In fact, this partnership would help further our initiative to becoming an agricultural hub within Eastern Ontario. Furthermore, these upgrades would help us attract shows and events, organizations, and more sponsorships that would ultimately better our organization and our community. While we are confident that these changes will enhance our annual fair, our grounds and facilities are also host to countless livestock shows throughout the year, which we hope will benefit just as much from these improvements.

Lastly, we intend for this partnership to inspire more volunteerism and more collaborations that will support the Spencerville Agricultural Society's newest initiative to Redefine, Rebuild, and Revolutionize the fair we all know and love.

Canarm products appeared in the Barn of Learning. The poultry barn was renamed the Canarm Poultry Pavillion, in honour of this partnership.

Organizational Announcement

It is our pleasure to announce that **Leo Pauls** has accepted the position of **Western Canada Territory Manager**. In this position, Leo will play a critical role in generating new opportunities with customers in the dairy market.

Leo and his wife Cecilia immigrated from Brazil in 2008. After a few years learning the language and culture, Leo got his first job in sales in the Ag Industry. Now Leo has over 7 years of experience in the dairy industry. He is passionate about cow comfort, always looking for opportunities that will improve the life of the cow and increase the producer's profitability.

Leo lives with his family in Blumenort, Manitoba. They love spending time outdoors while traveling, camping, fishing, swimming and hiking.

Leo can be reached at (431) 205-5022 or lpauls@canarm.ca

Featured Products

HEATED WATERERS

Livestock waterers need to remain operational all year round in all types of weather so that your animals get the water they need to stay healthy. Canarm AgSystems waterers are some of the best in the industry when it comes to preventing freezing in winter. Our user friendly designs require little maintenance and are energy efficient.

Heated Poly Waterers

Made from durable poly with a seamless stainless steel bowl which will never rust (4x corrosion resistant), our Poly Waterers will save you money with superior R value (R18) and a thermostatically controlled heating element with adjustable thermostat.

Available in multiple sizes from a small economic model sufficient for 25 cattle up to a large model for 100 cattle.

HLW Heated Livestock Waterers

The HLW features a strong double wall design made from steel with 2" of foam insulation (R15), 4x corrosion resistance and a thermostatically controlled heating element with adjustable thermostat. PAMI testing rated some models to be almost 3 times more energy efficient than competitive models tested at the time.

Available in multiple sizes from a small model sufficient for 50 cattle up to an extra large model for 200 cattle.

Then and Now... Left photo shows our original facility circa 1986. Right image is a recent drone shot taken a few weeks ago!

2024 Catalogues

Our Marketing team is hard at work completing the updates for our 2024 catalogues. Talk to your Sales Rep or watch the mail in the coming months for your 2024 updates.
